

LOW LIGHT THERAPY AFTER SURGERY

What is HEALITE II™?

Lutronic Healite II™ is a high performance LED (Light Emitting Diode), LLLT (Low-Level Light Therapy) system.

It harnesses the properties of light to accelerate cellular repair, skin healing and recovery times.

Key Benefits

Can be used after treatment to reduce erythema and edema by up to 50%

Stand-alone treatments can be used for wound healing and muscle relief via increased blood flow.

Treatments take 20 mins and feel very relaxing like lying in the sun without the risk of skin cancer. There are no risks/complications (with the exception of patients who experience claustrophobia or problems with flashing lights).

Contact us on 02 9387 2110 after your discharge from hospital to schedule your first healite.

We recommend and include in your surgery fee 2 x healite treatments for the first 2 weeks. Additional healite treatments are available for purchase (\$150 for 4 treatments)
